Susceptibility of Select Daylily Cultivars to Rust Infection caused by *Puccinia hemerocallidis*
Jean Williams-Woodward, James Buck, and Daren Mueller
University of Georgia

Susceptibility of Daylily Cultivars to Rust Infection

Resistant = Very little or no disease develops on plants

Moderately Resistant = Disease develops, but lesion number is few and sporulation is reduced.

Moderately Susceptible = Pustule number is less than susceptible cultivars, but pustules are easily seen.

Susceptible = Large number of pustules develop with profuse sporulation: "Spore-producing varieties"
